Herdsman: Bryan Leapaldt • 701-466-2553 • 701-739-8764 Cell

Welcome to our 12th Annual Production Sale!

We are looking forward to sharing the weekend with you in Bismarck. It doesn't seem possible that another bull selection season is here already. The cattle market has remained strong considering the grain markets are at historic highs.

We welcome our daughter Erika to our staff as she is in charge of marketing and promotion. Her knowledge of cattle and people are a valuable asset to our customers.

This is a powerful set of uniform bulls and heifers of both purebred and SimAngus. The demand for good SimAngus genetics continues to grow so we have expanded this segment. Almost all of the bulls are either an embryo calf or sired by an AI sire. Many of the lots have been tested for the polled gene and coat color.

The bulls will be ultrasounded with the new carcass EPDs and data available prior to the sale. It will also be posted to our website as soon as we get the results. The scrotal measurements will also be available before the sale.

Every bull and heifer is guaranteed to your satisfaction. We are offering a \$100 discount per bull if you take your bull home on sale day. If you leave them with us, we can take them home until April 1 with no charge, but we do recommend purchasing insurance on the bulls. Insurance will be available on sale day. Contact Jeff Thomas for more information. The bred heifers should be picked up either sale day or shortly after, as many will be close to calving. Contact Bryan or Roger concerning any special arrangements.

Please join us for a special presentation and social the night before the sale in the Cannonball Room of the Ramkota Hotel. Kelly Schmidt, the North Central Region ASA Field Representative will explain the new 70:70 grid based marketing program.

A noon lunch will be provided at Farmer's Livestock before the sale. Following the sale, everyone is invited to a supper at Circle Diamond Ranch Supply, Featherlite dealership in Mandan, located on the strip across from Kist Livestock and the Lonesome Dove. Bring the entire family.

We hope you can attend the sale, but if you are unable to, please contact us or any sale representative for assistance. For your convenience, we have also asked Edje Technologies to broadcast the sale over the internet on www.edjecast.com. You must register for a buyer number and be approved before the sale, so do not wait to the last minute.

We look forward to visiting with you!

Roger Kenner

For videos on the bulls, log on to www.kennersimmental.com

HERD HEALTH

All the cattle in the sale have had calfhood vaccinations of Virashield 6, 7-way Somnus, and One Shot. Pre-weaning shots were Bovishield Gold5, 7-way Somnus, and One Shot. At weaning, they received ResVac 4 and were poured with Imovec.

The bred heifers were vaccinated with Guardian Scour Vaccine, Type A Clostridia and were poured with Ivomec.

The bulls are on a Hubbard bull developer that is hand fed. They also have free choice grass hay in front of them at all times.

ANNOUNCEMENTS:

Announcements made sale day, and from the auction block during the sale, take precedence over printed material associated with this sale. Anyone attending this sale attends at their own risk. Breeders or any of the sale force will not be held responsible for any personal injury while attending this sale.

CATALOG PRODUCED BY:

EDJE Technologies • www.edje.com • 866.839.3353

AIRPORT:

Bismarck is served by Northwest and United Express along with excellent facilities for light aircraft.

EPDS:

EPDs in this catalog are the Spring 2008 EPDs for all animals.

PERFORMANCE DATA:

Complete ultrasound data and scrotal measurements will be available before the sale by logging on to www.kennersimmental.com. Data will also be available on sale day.

TRUCKING:

We will assist buyers in coordinating loads and making the most economical trucking arrangements possible. Anyone who takes the bulls home the day of the sale will receive a \$100 discount. For assistance with trucking arrangements, contact Erika.

INSURANCE:

We can keep the bulls at home for no charge until April 1, but we recommend purchasing insurance.

For more information contact: Jeff Thomas, 406.581.8859

TERMS & CONDITIONS:

- We guarantee all bulls to be breeders and we reserve the right to test any bull in question as a non-breeder for at least 180 days before making an adjustment. And, if the bull is declared a sound breeder by a component veterinarian, he will be returned to the buyer, at buyer's expense. In case an adjustment is required, it will be made with a replacement of equal value to animal in question, credit on purchase of another animal, or return of purchase price.
- Each animal becomes property and therefore is also the risk of the purchaser after it is sold. We guarantee the cattle to be healthy sale day.
- For those who cannot attend the sale, we will honor a telephone order and guarantee your phone purchase to meet your request when inspected personally by you.
- Certificates of registry will be supplied by the seller.
- All cattle sell under terms and conditions of the American Simmental Association and will be available in the office on sale day by request.

KENNER SIMMENTAL RANCH

Bull Buyer's Quick Guide to ASA EPDs and \$ Indexes

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ Indexes visit www.simmental.org. Listed below are the units ASA EPDs are expressed in:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (see below for more details)

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye.

Warner-Bratzler Shear Force (WBSF): Pounds of force required to shear a steak.

Stayability (STAY): Percent of daughters remaining in the cowherd at six years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (see below for more details)

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ Indexes come in. Through well-conceived, rigorous mathematical computation, \$ Indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ Indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a \$50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ Indexes visit www.simmental.org.

KENNER SIMMENTAL RANCH

EPD Information

ADJUSTED MEASUREMENTS AND THEIR USE IN THE CATTLE BUSINESS

At the Kenner Ranch we make every effort to provide you with the most accurate, complete and meaningful information possible. All data is derived from actual measurements - no guessing. To provide you with more meaningful information we use adjusted weights for all traits - including birth, weaning, and yearling weights. While many breeders are perfectly happy adding weight to a calf at weaning in compensation for being out of a heifer, they neglect to follow the same protocol at birth. For example, we add eight pounds to the actual birth weight of a calf by a two-year-old Simmental heifer to put it on a level playing field with a mature cow's calf.

Not only is there an adjustment for birth, weaning, and yearling weights, adjusted scrotal circumferences are standardized to a year of age.

ACTUAL/ADJUSTED BIRTH WEIGHT OR EPDS?

Generally, a cow tends to have 7% of her body weight in a calf at birth. For example, a 1500 pound cow would have a 105 pound calf, and a 1000 pound cow would have a 70 pound calf. This is another reason the actual and adjusted birth weights are not as meaningful as EPDs. Unless you know how big the cows are in the particular herd and how much they are fed, it is impossible to know if the birth weight is acceptable for each cow in that herd. But by looking at the calving ease EPD, you will know, compared to the average of the whole breed, if you could expect calving problems.

Even though adjusted measurements are much better than actual measurements for comparing animals, they fall far short of the power of Expected Progeny Differences (EPDs). Although we provide adjusted measurements for people not comfortable with using EPDs, we strongly recommend placing more emphasis on EPDs for any traits that are available. EPDs allow you to sift fact from feed and are the only way to compare animals from different herds. They simply are the most accurate way of evaluating genetic merit, no ifs, ands or buts!

Don't be confused by too many numbers. The main carcass EPDs to look at are the CW, YG, and MB. The BF and REA are two of the factors used to calculate YG, so you are basically already considering them in the YG EPD.

SIMANGUS EPDS

Any half Simmentals and some $\frac{3}{4}$ Simmentals will not list calving ease or maternal calving ease EPDs because there is no multi-breed evaluation for calving ease, yet. EPDs are calculated by pedigree estimates along with the actual data. To compute the pedigree estimate, the sire and maternal grandsire are key components and if they do not have calving ease or maternal calving ease EPDs, then the progeny cannot either. Some $\frac{3}{4}$ Simmental progeny do have calving ease EPDs, and that is because the other breed is the maternal granddam and does not affect the calculation.

You may notice that there are a few calves in this offering that are listed as Purebreds and do not have calving ease or maternal calving ease EPDs. They are purebreds, but they are sons of a $\frac{3}{4}$ Simmental bull who does not have calving ease EPDs, therefore, no EPDs can be configured.

Learn how to take advantage of the 70:70:0 grid marketing program through American Simmental Association and JBS Swift. Kelly Schmidt, ASA Field Representative, will be on hand Friday evening to discuss this new program that also utilizes the SimChoice program.

Complimentary food and cash bar will be available.

70:70 MARBLING AND MUSCLE

Dr. Jerry Lipsey, Executive Vice President American Simmental Association

All the fence building, hay baling, calf weaning and hundreds of other production tasks would be for nothing if the beef consumers of this nation disregarded our products. Beef Industry Leaders have focused on beef product demand and the results have been encouraging. Near record cattle and beef prices are partly the

result of attentive action toward beef eating quality and consumer satisfaction, and we salute NCBA as the driving force enhancing beef demand.

Consumers choose beef because we like the taste. Even though the science and physiology of taste are complicated, every beef lover understands the attributes of tenderness, juiciness and flavor.

Both genetics and management play large roles affecting beef taste. Harvesting healthy, young, fast growing, well-marbled cattle that require either no implants or perhaps, mild growth stimulants are key to consistent and predictable great tasting beef.

From a genetic management and strategy standpoint, selection for both growth and marbling have become important. The cattle feeding industry certainly values fastgrowing cattle with potential to grade Choice, and most breed associations boast rapid improvements in both Yearling Weight and Marbling EPDs. So, U.S. Beef producers are on our way to long-term success, right? Not so fast! All of this discussion has been focused on output value. Is anyone willing to address production costs? Fuel, feed, fertilizer and labor costs are at combined all-time record high levels. Without doubt, we must produce beef that maintains and grows consumer demand, but every tool to control and combat costs is now important to the future of our industry.

Producing highly marbled beef is only part of the puzzle of beef industry prosperity. We absolutely must produce tasty, tender, juicy, high-value beef using proven technologies that can economically sustain our businesses. In this industry, the most effective and verified genetic technology available that can both increase output value and decrease cost of production is wise crossbreeding. The huge impact of heterosis on the calf crop and postweaning performance will almost always greatly decrease cost per unit of production. Moreover, prudent selection of genetics making up the crossbreds, will balance production values, such as maximizing percentage Choice, YG 2s. We have positioned Simmental to ideally blend with British genetics (called biological complementarity) and produce fast growing, USDA Choice, Yield Grade 2 fed cattle.

Industry and academic leaders have often suggested targets of 70% Choice or higher, 70% YG 1s and 2s, and 0% outs (USDA Standard, YG 4s and 5s, light weights, heavy weights, etc.). Is their target achievable?

For more than a decade, the American Simmental Association has tested sires for ability to deliver both marbling and muscle, and our progress is becoming recognized across the industry. Simmental breeders have paid attention to identifying genetic lines that deliver both meat quality and carcass meat yield. In the recent decade, Simmental have improved both Marbling and Yield Grade EPDs; not many breeds can make that claim (you are welcome to review our genetic trends on www.simmental.org).

Simmental X Angus and Simmental X Red Angus cattle can and do deliver a higher percentage of Choice, YG 2 carcasses than any other popular crossbreds or straightbreds. Considering that most herds retain heifer replacements, what combination of breeds can deliver more net value to America's cowherds than Simmental X British crossbred steers and replacement heifers?

Perhaps everyone in the cattle feeding industry understands the cost reduction of feeding Continental X British crossbreds, and beef packers profit from the meat yield advantages of muscular cattle. However, our industry has been waiting for price signals that encourage both high quality and outstanding cutability cattle.

To kick-start this process, the American Simmental Association and JBS Swift & Company have agreed to a marketing grid with historic rewards for Choice, YG 2 carcasses.

This marketing grid, called 70:70, provides outstanding rewards for fed cattle that can deliver both high marbling and muscular carcasses. This is a high payoff opportunity for well-documented genetics and management. Properly managed fed steers and heifers that result from carefully selected genetic sources will receive excellent premium price rewards from Swift. This represents a tremendous opportunity for feedyard managers who confidently know the source and history of cattle selling under the ASA-Swift grid marketing arrangement.

Understand, 70:70 isn't for "either/or cattle" (either fat, highly marbled; or lean, lowly marbled), where the seller "rolls the dice". This grid has true rewards for groups well above average for both quality and yield grade. There are hundreds of feedyards across the Midwest with pens of Continental X British cattle that can benefit when marketed on 70:70. The opportunity to simultaneously get premiums and reduce production costs may well be the most important next step for our beef industry to sustain and grow success. We don't think there are many silver bullets in cattle and beef production, but reducing production costs while receiving premiums for high quality, high meat-yield carcasses may be the best invention yet.

Listen to Kelly Schmidt on Friday, February 8th to learn more about the 70:70 program and how it can benefit your program.

Association

**Classic
SALE**

*Thank you to the people
who purchased our genetics at the
2007 North Dakota Classic Sale in December!*

KS Tabitha T355 #2395675

SAV Net Worth x Nichols Legacy

EPDs: - -2.5 34 73 - 11 28

SimAngus

Purchased by ETR Simmentals,
Kim Klotz, Seward, NE.

KS Tamara T30 #2395676

KS Allero R116 x Alberda Traveler 416

EPDs: - 1.6 30 65 - 7.6 23

SimAngus

Purchased by Oak Meadow Farms,
Matt Aggen, Harmony, MN.

Thank you to the following breeders who purchased the embryos:

Trax P499 x TNT Gunner: Sargeant Farms, Sandstone, MN

Trax P499 x TNT Dynamite Black: Sys Simmentals, Douglas, ND

KS Kayla x SAV Traveler 004: Western Cattle Source, Crawford, NE

KS Kayla TNT Dyanmite Black: TNT Simmentals, Almont, ND

*We wish you all the best of luck with the genetics you purchased!
Watch for them in their programs!*
