

KENNER SIMMENTAL RANCH

WITHOUT **COMMITMENT**
NOTHING HAPPENS.

- T.D. JAKES

Over the past 40 years we have committed to performance and longevity; for our customers and our cow herd. We expect our cattle to go home and work for you, but we're also invested in helping you reach your operation's goals. This business is more than cattle, it's about helping ensure and expand your livelihood. We're committed to quality and we're committed to you.

24TH ANNUAL PRODUCTION SALE | FEBRUARY 8, 2020
1:00 PM | AT THE RANCH - LEEDS, ND

Selling 131 Bulls & 68 Bred Heifers | Black & Red - Purebred & SimAngus and Red Angus

Welcome!

I think the definition of farming & ranching should be “the act of challenging oneself with more than one can handle so one can barely make it, but feeds the world.” It sure has been a year of challenges this past year for almost everyone, especially in the Dakotas. But what I do love about this industry is that we never give up because we all have passion for agriculture. We are all committed to providing food for the world and to creating a better place to live by taking care of the land we live on. Here at our ranch, we are not only committed to our cattle, but are also committed to our customers. We want to make sure we provide our customers with what they need in their programs to succeed.

Each year, we are trying to better our herd so we can offer you better genetics. In 2016, we decided to start retaining ownership on our steers, so we could get data back and truly see how they do on the rail. The first couple years we made 70% choice or higher, but by watching for performance and carcass traits, we were able to make 90% choice or higher this past year! Using EPDs does work! We do not only select for carcass traits, but instead select for balanced EPDs and we are improving our herd in all traits!

We have also been submitting our carcass data to ASA for the past 3 years, and are part of the Carcass Xpansion project, so they are running genomic tests on the steers. This data will help in making the carcass EPDs even more accurate.

We realize that most are still paid by the pound, which is why performance is still important to us, but the buyer of your calves is going to appreciate the grading potential your calves have and will come back to buy again the next year. We are focused on providing you with bulls that will give you live calves that grow and also perform on the grid.

There is a lot of information to use for bull and heifer selection now days. If you need any help understanding what it all means and how to use it, please call us and we'd be glad to help. You are also welcome any time before the sale to look at the bulls and heifers. Just call ahead to make sure we are around.

We look forward to seeing you on Sale day, February 8 at our ranch!

Sincerely,
The Kenner Team

ANNOUNCEMENTS

Announcements made sale day, and from the auction block during the sale, take precedence over printed material associated with this sale. Anyone attending this sale attends at their own risk. Breeders or any of the sale staff will not be held responsible for any personal injury while attending this sale.

AIRPORT

Devils Lake Regional Airport (DVL) is served by United to Denver and has excellent facilities for light aircraft.

Leeds (D31), Maddock (6D3) and Rugby (KRUG) have airports for light aircraft. Check runway conditions before landing.

EPDS

BOLT EPDs pulled BOLT EPDs pulled 12/31/2019. All the bulls have been LD-tested (and parent verified) and have the genomics incorporated in the EPDs in this catalog unless they are noted otherwise. All will have genomics by sale day.

HERD HEALTH & DATA TEAM

Herd Veterinarian, Dr. Judy Gibbens, Gibbens Vet Service, Cando, ND

Pregnancy Ultrasound, Dr. JJ Hovde, High Plains Vet Service, Sydney, MT

Carcass Ultraound, Jason McLennan, Inc., St. Onge, SD

PERFORMANCE DATA

Complete ultrasound data will be available before the sale by logging on to www.kennersimmental.com. Data will also be available on sale day.

VIDEOS

Videos of the bulls will be available on our website in the middle of January.

Log on to www.kennersimmental.com.

SALE FORMAT

The cattle will sell by video on sale day. All the bulls and heifers will be penned next to the sale barn by 9 am on sale day and will stay in those pens throughout the sale.

TRUCKING

We will try to deliver the bulls to the buyer's farm, or we will assist buyers in coordinating loads and make the most economical trucking arrangements possible. All the bred heifers must be picked up on sale day or have trucking arrangements made soon after since they will be close to calving. For assistance with trucking arrangements, contact Erika.

INSURANCE

We can keep the bulls at home for no charge until April 1, but we recommend purchasing insurance.

For more information contact: Erika Kenner, 406-581-1188

TERMS & CONDITIONS

- We guarantee all bulls to be breeders and we reserve the right to test any bull in question as a non-breeder for a reasonable amount of time before making an adjustment. And, if the bull is declared a sound breeder by a competent veterinarian, he will be returned to the buyer. In case an adjustment is required, it will be made with a replacement of equal value to animal in question, credit on purchase of another animal, or return of purchase price.
- Each animal becomes property and therefore is also the risk of the purchaser after it is sold. We guarantee the cattle to be healthy sale day.
- For those who cannot attend the sale, we will honor a telephone order and guarantee your phone purchase to meet your request when inspected personally by you.
- Certificates of registry will be supplied by the seller.
- All cattle sell under terms and conditions of the American Simmental Association and will be available in the office on sale day by request.
- We reserve the right to collect 100 units of semen on any bull in the sale for in-herd use only. The collection would be at our expense and buyer's convenience. Each bull will sell to the buyer with 100% ownership opportunity.

Can't make it? Watch and bid online through DVAuction.

Log on to **www.dvauction.com** and register for the sale. *You must be approved prior to the sale, so please register early.*

KENNER SIMMENTAL RANCH

Understanding the Data

WHY USE EPDS?

We have included all the data we can for each animal in this catalog, but we strongly recommend using the EPDs the most. EPDs allow a buyer to compare the animals across the breed. If you look at the actual data of an animal, it only tells you how they compare in that particular herd. By using the EPDs, you can compare them across herds and within herds more accurately.

We've formatted our lot boxes to include the percentile ranking for each trait if they rank within the top 50% of the breed. This will make it easier to evaluate each animal.

CALVING EASE EPD

Please understand the CE EPD is actually **heifer** calving ease. This number tells you how those bulls will calve on heifers - % unassisted compared to the other bulls on heifers. For example: If Bull A has a CE EPD of 10 and Bull B has a CE EPD of 5, Bull A will have 5% more unassisted births than Bull B when used on heifers. If you are going to use the bull for cows, you do not need to have that number as high.

GENOMIC EPDS

There are several genomic tests available. With a genomic test, the animal is also parent verified. The HD test (150K SNPs) is required for AI sires and donor cows, but the LD test (30K SNPs) is accurate in all other situations. All the tests will be incorporated in to the EPDs through the single-step system (BOLT) which is more accurate than in the past and will improve the accuracy of all tested animals.

All the bulls in the offering have been LD tested and the resulting EPDs are in the catalog. If a bull will be used in an AI program, he will need to be HD tested after the sale.

DILUTION GENE (DL)

All the red animals in this sale are non-diluted (DLF). DLF means they are free of the dilution gene. Grey calves will not result from any of these animals when bred to black animals.

OH/RC GENETIC TRAITS

OH or Oculocutaneous Hypopigmentation is a cosmetic genetic trait affecting Simmental cattle. It is a recessive trait so it is only possible from the mating of two carriers. It is non-lethal and doesn't affect performance of the animal, but the animals will have "white-colored" eyes and/or a diluted hair coat. The most popular recent ancestor that is the carrier is PVF-BF BF26 Black Joker. We have tested everything in our herd that could possibly be a carrier and have identified the ones in this sale as either **OHF (Free)** or **OHC (Carrier)**.

OHC means that animal carries the gene. If mated with other carriers, there is a possibility to see the trait. If not mated to carriers, you will not see the trait, but may pass the carrier gene to some of the progeny.

RC is the Red Charlie gene. This gene is responsible for passing along the red gene even though an animal would test homozygous black. The test results are masked and have to be tested further if a potential carrier. If the animal results as homozygous black, but a RC carrier, then they are actually heterozygous black. We have tested any bulls that could be potential carriers and have identified them in the catalog. You'll see **RCc for carrier** or **RCF for free**.

DD GENETIC CONDITION

Developmental Duplication (DD) is a genetic condition where the affected calves frequently develop extra body parts (often limbs), a condition called polymelia. This is a non-lethal, recessive trait, so the animal needs to have both genes for it to show signs. If you have a carrier (DDC), you do not want to mate that animal to another carrier animal.

HERD HEALTH

BULL VACCINATIONS

Calfhood: Inforce 3, Endovac

Pre-turnout: Inforce 3, One Shot BVD, 7-way Somnus

Pre-weaning: 7-way Somnus, Bovishield Gold One Shot, Inforce 3, Dectomax Injectable

Weaning: Bovishield Gold One Shot, Somnus

December: Wormed with Safeguard, Poured with Sabre Ultra

Mid-January: Poured with Cleanup II

BRED HEIFER VACCINATIONS

Pre-breeding: Bovishield Gold VL5 HB, Boosted with Bovishield Gold VL5 HB

November: Scour Bos 9, Type A Clostridia

December: Wormed with Safeguard, Poured with Sabre Ultra

January: Scour Bos 4, Type A Clostridia

The bulls were fed a TMR ration formulated by Tyler Melroe of Hubbard Feeds. Our ration is formulated on a moderate level of energy that's appropriate for the genetic type and the northern environment just as our feeder cattle are fed. Our trace mineral program is designed to improve structural integrity, foot quality and immune function. They are on a high-end supplement program. Our average ADG for the 2020 sale bulls ADG was 3.6 on a 102-day test.

BVD AND JOHNE'S STATUS

All animals in the herd tested negative for BVD. We have maintained our Johne's Status and have not had any test positive.

Can't make the sale? Watch & bid online for FREE at www.dvauction.com !

DVAuction
Broadcasting Real-Time Auctions

Buying online is as easy as 1, 2, 3...

1. Create an account at www.dvauction.com under the "register" tab
2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction-a DV representative will notify you once you have been approved
3. Tune in for the sale and make your purchases!

After the sale, contact the sale manager or owner to arrange transportation and payment. **High speed internet** is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy Bidding-if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing, and fill in your maximum bids. We'll handle the rest!

Having troubles?

During the auction, you can type a message to the operator at any time for assistance. Our full-time support team can also always be reached at (402) 474-5557.

KWA FLYF RED MOUNTAIN 16Z

KWA FLYF RED MOUNTAIN 16Z

Non-diluted Red / Homozygous Polled

The last time we had any Red Mountain calves for sale was 2017. We had purchased semen by him at a charity auction years ago and we had saved 3 units for a flush which we used with the Penny X395 cow and ended up with 24 embryos. We put the last of them in this year, so we may have a couple more next year, but we'll see. Red Mountain semen is not sold in the US. His sons in 2016 & 2017 sold extremely well and we've loved his daughters. The combination between him and the Penny cow is exciting! She just clicks with everything! There are 6 full brothers to pick from here.

KS PENNY X395

Non-diluted Red / Homozygous Polled

X395 clicks with absolutely everything! In the past, she had sons by ShamWow, Bases Loaded, Rebel, Hard Drive, and Ambition. This year, she has some by Red Mountain, Ambition, Daytona, Major Move, Newton, Brown Redemption, and Rebel. She's also the mother of the Zada cow that Doug Bichler owns and is in his donor program. X395 has a beautiful udder and consistently puts performance, good structure, and great dispositions into her progeny. Take your pick this year, as she's given quite the selection! Sons sell as Purebred lots 1-7, & 22 and SimAngus lots 45-49, & 51-57.

Lot 7

Lunch break on ultrasound day! Notice the fire hose hanging on the fence. We were in a D2 drought at that point yet so we had to water down the pens to keep the dust down.

We always do a team building activity at our Christmas party! This year, they had to flip the blanket over without stepping on the floor!

Red Purebred Bulls

RED PUREBRED BULLS

KS BRINLEY B33

KS BRINLEY B33

Heterozygous Black / Homozygous Polled

Brinley is a granddaughter of our W82 donor, who goes back to our Kayla cow. She allows us more outcross options being heterozygous black. This year, you'll find calves by Robin Hood, & Commotion in the red bulls and by Cowboy Cut in the Black Purebred bulls. Her grandmother, W82, also has 2 lots in the SimAngus section. Brinley has a power pedigree, so look to her progeny to add pounds and REA while maintaining maternal traits and docility. Sons sell as Red Lots 8-11 & 36 and PB Black Lots 74-76.

KS ROBIN HOOD C390

Non-diluted Red / Homozygous Polled

Robin Hood is a Red Mountain son and was the high-selling red bull in our 2016 sale to Ben Stroh of Tappen, ND. If you want to add frame, length, depth of body and tons of performance look at his sons. They are also super gentle and many are dark, cherry red. This is our 2nd year of sons of him and we like them as well as last year! Semen is available on KS Robin Hood through Stroh's. Sons sell as Lots 8-15.

RFS BULLETPROOF B42

RFS BULLETPROOF B42

Non-diluted Red / Homozygous Polled

We Al'd to Bulletproof last year since we had used a son of his naturally already, RFS Daytona. We have been extremely happy with the Bulletproof calves. We also purchased another Bulletproof son last year from G&D Simmentals that we used heavily in our pasture this past summer. The sons of Bulletproof tend to be dark, cherry red, and are packed full of growth and thickness. You'll find 7 progeny in the red bulls (Lots 16-21) and 1 black purebred son (Lot 101).

RFS DAYTONA D73

Non-diluted Red / Homozygous Polled

We purchased Daytona from Rydeen Farms in Minnesota in 2017 to be a Purebred performance red bull. This is our second and last calf crop as he was injured from fighting with the bulls last winter. His sons have great depth & thickness with a nice hip and rear leg structure. They are stylish in a powerful package.

• Purchased dam from the G&D Simmental, Calvin, ND in their sale in 2016.

Erika & Tyler got to enjoy the Montana mountains this summer.

Roger & Jeanette went to one of their favorite places – Medora!

KS LITTLE JOHN C85

KS LITTLE JOHN C85

Non-diluted Red / Homozygous Polled

Little John sold in our 2016 sale to Mike Traxinger, SD, the same year Robin Hood sold. They were both Red Mountain sons, but Little John is a calving ease bull who works on heifers. We used him in our AI program on heifers and high performing cows. The muscle pattern follows more of a calving ease look, but they are sound and functional and still grow! Semen on KS Little John is available through Traxinger Simmentals, Houghton, SD.

MFSR Deputy 013D / Sire of Lots 31 & 32

Non-diluted Red / Homozygous Polled 3/4 SM 1/8 AN 1/8 MX

We purchased Deputy from Miller Simmentals in Gilford, MT in 2017. He has been used to clean up on heifers and has worked well. He's an Xpectation son out of a black, NLC Superior dam, so he brings in a different pedigree for the reds and he excels in all carcass traits. There's only a couple of bulls by him in the sale as many were later born. He is also a service sire to a few of the heifers in the sale.

**ALL RED BULLS AND HEIFERS IN THE
SALE ARE NON-DILUTED RED.**

KS NEWTON D181

KS NEWTON D181

Non-diluted Red / Homozygous Polled
5/8 SM 1/4 AR 1/8 AN

Newton was one of the Commotion sons that sold in our 2017 sale to Dan Birkeland from Sheyenne, ND and we collected semen to use in our own herd. After using him a couple years AI/ET, we thought we'd try to buy him back! Dan allowed us to purchase him back before breeding last summer, so we will have quite a few more by Newton next year! He worked well on our heifers and they've still grown and performed well. Newton adds a little more calving ease than Commotion. He also puts an amazing disposition in to his calves. Sire of Lots 47 – 50.

Red SimAngus Bulls

ALC MR RIGHT KIND C13

ALC MR RIGHT KIND C13

PB Red Angus

We purchased Right Kind C13 in 2016 from the Pelton Red Angus sale in KS. We've used him as clean-up in our Purebred Red Angus program and on heifers and high birth weight cows. He is still in our herd and has perfect feet. He calves easy and has a great disposition. He is a true calving ease bull, so when we combine him with higher growth females, it's a great combination. Since he was used clean-up, his calves were born later, so keep that in mind. He has 3 sons in the SimAngus section (Lots 58-60) and 2 in the Purebred Red Angus section (Lots 68-69).

Purebred Red Angus Bulls

PUREBRED RED ANGUS

For the past few years, we've been developing our Red Angus program. Seems like every year, we have 2/3 of them born as heifer calves! We have focused our Red Angus program around calving ease and carcass traits, but we are selective on udder quality, disposition and feet as well. We do not tolerate bad udders, bad dispositions or bad feet. We know how frustrating it is to pay money for something to have a problem the next year. We are diligently identifying problem animals or pedigrees and eliminating them from our breeding program.

We only have six yearlings to offer this year. But we also have one 2-year-old that was held back as a spare bull last year and wasn't needed by anyone. He is a good bull and passed his semen test early last year and again this winter, so we are offering him here. He is a virgin bull and will be able to cover more cows than a yearling.

Black Purebred Bulls

DOUBLE J X011

DOUBLE J X011

Homozygous Black / Homozygous Polled

X011 had many progeny in the 2019 by 5 different sires. All of her matings click! We only had a small few embryos left for this year, so we only have 3 ET's by her in this sale plus her natural calf by Camp Campbell, but they are all exceptional. We also have an awesome set of heifer-mates in the replacement pen. X011 stamps her calves with so much length, depth and muscle shape and gives them an unbelievable disposition. They are so easy to be around and to admire. Dam of Lots 70-73.

COLORADO BRIDLE BIT E752

COLORADO BRIDLE BIT E752

Homozygous Black / Homozygous Polled

We tried the Colorado Bridle Bit bull after he was purchased by Mike Traxinger, SD, from the Bridle Bit Simmental Ranch in Colorado. He works perfect on heifers and high performing cows. After calving, they filled out and have really done well. They are stylish, yet deep bodied and have adequate thickness out of a calving ease sire. His EPD profile is in the top of the breed for calving ease traits, docility and carcass. He works well in combination with the power females in our herd. Sons sell as PB Lots 79-85 & 102-105 in the SimAngus section.

HOOK'S BLUEPRINT 13B

Homozygous Black / Homozygous Polled

Last year, we had Blueprint calves by X011 that were exceptional. So, we tried him in our AI program! Blueprint carries a little more birthweight, so he is definitely a power bull, with him being in the top of the breed for WW, YW and REA plus Docility EPDs. Sons are lot 86-92.

Lot 92

NLC PROGRESSIVE 40C

NLC PROGRESSIVE 40C

Homozygous Black / Homozygous Polled

In the past, we've only had a couple Progressive bulls in the sale as we've used him for cleanup and have had more heifers born than bull calves. This year, we have 6 bulls and 6 bred heifers. Progressive offers an outcross pedigree. We've used Progressive successfully to clean-up on heifers and high performing cows. They calve easy and still have performance, adequate frame, eye appeal and balanced EPDs. He was purchased from Nelson Livestock in Wibaux, MT in 2016. Sons sell as PB Lots 93-96 & 116-117 in the SimAngus section.

CAMP CAMPBELL E737

CAMP CAMPBELL E737

Homozygous Black / Homozygous Polled

Campbell was sold the same year as Colorado Bridle Bit by Campbell Simmentals of Colorado to Nelson Livestock in Wibaux, MT. The pedigrees are similar, with both having GW Substance as a paternal grandsire and the dam's are both Sand Ranch Hand daughters. We loved the length and eye appeal that Campbell had and that's what we've seen in his progeny here. We only have 3 calves by him in this sale – and one is a natural calf by X011 in the Purebred section. Campbell has a little less calving ease and more power than Colorado, but again, balanced EPDs all the way across. Sire of Lots 72 & 106-107.

LRS EVOLUTION 328E

LRS EVOLUTION 328E

Homozygous Black / Homozygous Polled

Evolution was our pick of the Lassle Simmental Ranch sale in 2018 as a outcross power bull for us. We used him as a clean-up bull and are impressed with his first calves – he adds length and frame. He was injured after breeding this year, so we'll only have one more calf crop by him. We used him primarily on calving ease SimAngus females and that really clicked. There are 5 progeny in this sale – PB lot 99 and SimAngus lots 112-115.

TJ FRANCHISE 451D

Homozygous Black / Homozygous Polled
1/2 SM 1/2 AN

This was our first calf crop by Franchise. He is a Cowboy Cut son that is an ABS bull, raised by Triangle J Ranch in Nebraska. We used him primarily on our SimAngus females to keep them 1/2. They have so much style & eye appeal with a great amount of thickness and muscle shape. Franchise is smaller framed, so we used him on larger framed cows to compensate as much as we could. We also used him on heifers where he calved with no assists. We like these calves and used him again in our heifer AI program for this year. Sire of Lots 124 - 128.

S POWERPOINT WS 5503 Purebred Angus

Powerpoint was raised by Spickler Angus Ranch of Glenfield, ND and sold to Ellingson Angus & ST Genetics and the progeny have been sought after in their programs. Last year, we only had 2 in the sale and this year we only have three in the sale as we primarily use him on PB heifers and had several daughters born too. All three of his sons in this sale are standouts again. They calve easy, but grow and have so much eye-appeal and sound structure. Disposition is excellent. Sire of Lots 129 – 131.

We purchased Alamo at the 2019 Bichler Simmental Sale and are super excited to see his calves this winter! He looked amazing on sale day and just kept getting better all through the summer and Fall, even after he bred 20 naturally this breeding season. Alamo offers an outcross pedigree to add to most cows. He has tremendous growth and carcass value to make him valuable in commercial programs that pay by the pound or retain ownership. **Semen: \$25/unit**

Hard Rock was the high-selling bull at the 2019 G&D Simmental Sale for \$27,000. We really liked his phenotype and performance and we are still impressed! He has so much length and thickness, which should add pounds in the end. He held his condition while breeding 30 cows naturally and he stands on great feet. He excels in growth traits and maternal and is in the top 25% for marbling and the top 3% for REA. Besides a great phenotype, he has a balanced set of EPDs to use on cows. **Semen: \$25/unit**

We sold Newton in 2017 to Dan Birkeland of Sheyenne, ND. We used him in our AI program and loved the calves. After a couple years, we called Dan and offered to buy him back so we could use him ourselves. We purchased him back before breeding in 2019, so we will have a lot more calves by him born this winter. Newton calves super on heifers, yet still adds growth and his progeny have been some of the most docile in the pen each year. We'll calve out his first daughters this winter and are looking forward to seeing how they do. We love what Newton has added to our program and are excited to have more to offer in our sale by him next year! **Semen: \$25/unit**

Commotion has put bulls in the sale now for the past 4 years and is one of those all-around complete bulls. We've used him on our own heifers and we get by, yet they grow and are sound, correct, and have great hip structure. The dispositions are good and the daughters' udders are beautiful. Commotion provides an outcross pedigree in the reds and does so many good things. His calves definitely add pounds at weaning and gain well. **Semen: \$25/unit**

KS Outburst sold in the 2019 Kenner Sale for \$32,000 to TNT Simmentals, however, after the sale, he injured his shoulder in the lot at our place. He was not able to breed for the 2019 season, so we purchased him back from TNT's. He healed up by the middle of the summer and is sound now. We plan to use him in our pastures this summer. Outburst will add the growth and frame that many have been looking for in an AI sire for their cows. His dam is now in our donor pen and has several daughters in our herd who have bulls in our bull sale this year too. She also has an outstanding Bulletproof son in the sale this year. The Robin Hood calves have sold well, performed well and are doing great things in the female and bull end. Consider Outburst for an outcross, performance red bull! **Semen: \$25/unit**

Robin Hood sold in our 2016 sale to Ben Stroh of Tappen, ND. We've used him extensively in our AI program. We absolutely love his calves – bulls and heifers. He calves easy on cows and adds growth and thickness and puts exceptional dispositions on the calves. We will calve out his first daughters this winter, but so far, they've been easy fleshing, easy to handle and look good.

Robin Hood has over 70 progeny reported between us and Stroh's, so he is proven. Use Robin Hood to add growth, frame, and docility to your programs.

Semen: \$25/unit, Available through Stroh's at 701-269-0236

For semen inquiries on all the bulls except KS Robin Hood, contact Erika Kenner, 406-581-1188 or erika.kenner@gmail.com

Use of natural service sires as part of a successful breeding program.

Timothy J. Goldsmith DVM, University of Minnesota College of Veterinary Medicine

Reproductive performance in commercial beef production is a key aspect of profitability. The use of natural service bulls is a common way to create pregnancies in commercial beef production. Done appropriately, very high reproduction goals are achievable with natural service. These goals would be 90 plus % pregnant in a 60-day breeding window with 60% pregnant in the first 21 days of the breeding window. To accomplish these goals requires more than just turning out a bull; it requires proper management of both the cowherd and the breeding bulls. The following is a list of key management considerations for natural service bulls to help achieve successful and repeatable outcomes for reproduction using natural service bulls.

Complete Breeding Soundness Exam (BSE)

All bulls should receive a complete BSE every year, in a period relative to use (30 – 60 days prior to turnout). This gives time for any needed treatments/rechecks, as well as opportunity to source replacement bulls if needed, and assures that bulls have the physical ability to produce and deliver semen capable of creating a pregnancy at the start of breeding season. A complete BSE consists of an evaluation of the physical condition, BCS, internal and external anatomy as well as semen motility and morphology. A qualified veterinarian is the best choice to perform a complete BSE.

Stocking Rate / Bull to Cow Ratio

The number of cows a bull can service in a targeted breeding season will depend on the bull's age and the environment the bull will be working. A common number used in western range situations is one bull per 20 – 25 cows. This would apply to bulls that are at least 2 years old, yearling bulls should not be asked to cover more cows than their age in months. Larger pastures and poorer forage quality will generally lower the number of cows a bull can service; similarly, better forage quality and smaller pastures (less physical travel) can increase the number of cows a bull can potentially service.

Dominance

Dominance among bulls is driven primarily by age and size. Bulls for use in multi-sire pasture groups should be grouped/housed together so they will be acclimated to each other prior to use. Proper acclimation of sires will greatly reduce the amount of fighting at introduction to the cow group when we want bulls to be breeding. The use of young and old bulls together can also be accomplished successfully with acclimation, but the expectation should be a reduction of pregnancies from the young sire. Following the breeding season, bulls often fall to the bottom of the dominance structure within the cowherd, thus removal from the cowherd should occur following the breeding season.

Maintenance / Observation

Starting the breeding season with a healthy and physically fit bull is the first step, but close observation is important to make sure a bull maintains his ability to breed cows. Injuries to the penis or prepuce, lameness/musculoskeletal injuries or diseases issues like pinkeye or foot rot can impact the ability of a bull to successfully breed cows. Early identification can allow for removal of a bull and replacement

with another bull so cows are not missed, but also early treatment, if needed, can be the difference between the loss of a breeding season for the bull and the complete loss of a bull.

Nutrition / BCS

Bulls should be kept in a good working condition prior to use, target Body Condition Scores should be in the 5 - 6 range. Bulls with excessive fat can have sperm development issues related to heat regulation due to fat in the scrotum as well associated issues with Libido (willingness or drive to breed). Bulls that are too thin are at risk for a decreased breeding capacity and do not last the breeding season. Bulls should be developed and maintained with lower starch / high roughage diets that result in a well fleshed but not overly fat bull. Bulls should also be acclimated to a diet that is similar to what they will consume while breeding, prior to turn out. It takes roughly 60 days for the microbes of the rumen to adapt to diet changes, limiting the impact of a diet change can help a bull maintain condition during the breeding season.

Animal Health

Animal health management (vaccines, parasite control, etc.) of bulls should be equal to or greater than the cowherd. DO NOT FORGET THE BULL. If you are in a trich area or have other unique disease concerns work with your veterinarian to get those addressed at least 30 days prior to turnout.

In summary, we are asking bulls to work for 60 days if we are using a targeted breeding season. Preparing bulls appropriately for the breeding season ahead of time can have huge benefits for the bulls and the outcomes of reproduction in your cowherd. Once we prepare them, close observation and management can help keep them working and address any issues in a timely manner. Of course, this is only part of the equation for successful repro outcomes, good cow management and nutrition is essential for successful repro outcomes as well. Do not hesitate to develop a team of production resources/experts to help you establish and reach your goals for your cowherd.

Dr. Timothy Goldsmith has been a faculty member in the College of Veterinary Medicine at the University of Minnesota since 2008. In addition to his veterinary degree, Dr. Goldsmith has a masters of public health degree and is certified by the American College of Veterinary Preventative Medicine.

Before joining the University of Minnesota, Dr. Goldsmith was in private practice as a large animal veterinarian. His current research and academic interest and focus is in emergency response planning to support continuity of business from planning to practice, applied biosecurity, quality assurance, the judicious use of antibiotics in food animal production systems, and teaching of beef production systems medicine to veterinary students.

Dr. Goldsmith recently spoke at a conference about Breeding Soundness Exams that Erika attended.

Bull Buyer's Quick Guide to ASA EPDs and \$ Indexes

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing in what units they are expressed. For example, if the above case referred to weaning weight EPDs, sire A would be expected to sire 15 pounds more weaning weight than sire B. If calving ease was the trait, sire A would be expected to sire 15 percent more unassisted births in first-calf heifers; in other words, if sire B sired 30 assists in a group of 100 heifers, we would expect sire A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit www.simmental.org. Listed below are the units in which ASA EPDs are expressed:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See \$ Indexes for more details.)

Back Fat (BF): Inches of carcass backfat at 475 days.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight at 475 days.

Docility (DOC): Percent of offspring receiving a disposition score of 1 (docile).

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide pieces of the economic puzzle. This is where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on integrated commercial production. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sires for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you are keeping replacements use API, if not, use TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit: www.simmental.org

Important disclaimer: DO NOT compare index values of purebreds of different breeds, hybrids of different breed composition or purebreds with hybrids — our system was not developed to make valid comparison among these groups. Therefore, you must first determine the breed and breed composition appropriate for your herd and use index values to compare animals within that population.
